I-710 Corridor Aesthetic Master Plan
Aesthetic Conceptual Theme Development
The I-710 Corridor Aesthetic Master Plan was developed with the cooperation and assistance of the following agencies and individuals:

**Community Stakeholders**
- City of Bell – Joe Perez
- City of Bell Gardens – Carmen Morales
- City of Commerce – Alex Hamilton
- City of Compton – G. Harold Duffey
- City of Long Beach – Robert Zur Schmiede, Barbi Clark
- City of Lynwood – Emilio Murga, Elias Saikaly
- City of Paramount – Chris Cash
- City of South Gate – Steve Lefever
- City of Vernon – Kevin Wilson
- LA County – Claire Robinson
- Metro – Ernesto Chaves, Lucy Olmos

**California Department of Transportation**
- Jennifer Taira – Landscape Architecture
- Javier Chavez – Headquarters Bridge Architecture and Aesthetics
- Abdi Saghafi – Project Management
- John Vassiliades – Project Management
I-710 Corridor Aesthetic Master Plan

CONTENTS

I. Project Description

II. Development of the Corridor Aesthetic Theme
   - Aesthetics Committee
   - Purpose, Goals, and Strategies
   - Process and Methodology
   - Developing Aesthetic Treatment Options and Themes

III. Design Guidelines
   - Design Guideline Benefits
   - Safety and Maintenance Considerations
   - Environmental Considerations
   - Historical and Cultural Considerations
   - Aesthetic Structure Design Considerations

IV. Corridor Aesthetics Proposal – Modern Theme
   - Conceptual Images of Aesthetic Structure Design

V. Sound Walls
   - Sound Wall Program and Design Criteria
   - Sound Wall Block Types
   - Sound Wall Existing Conditions
   - Conceptual Sound Wall Images
I-710 Corridor Aesthetic Master Plan

I. Project Description
I-710 Corridor Aesthetic Master Plan
Route I-710 Project Description

The Long Beach Freeway (I-710) is a vital transportation artery, linking the ports of Long Beach and Los Angeles to major Southern California distribution centers and intermodal rail facilities. An essential component of the regional, statewide and national transportation system, it serves both passenger and goods movement vehicles.

As a result of population growth, increased cargo container volume at the ports of Los Angeles and Long Beach, increasing traffic volumes, and an aging infrastructure, the I-710 Freeway experiences serious congestion and safety issues.

In March 2005, following an extensive technical and community participation process, Metro completed the I-710 Freeway Major Corridor Study (MCS). The study analyzed congestion and mobility along the corridor in order to develop transportation solutions that preserve and enhance the quality of life of surrounding neighborhoods and communities. Metro and six project participants are now conducting an Environmental Impact Statement/Environmental Impact Report (EIS/EIR) to analyze the range of possible improvement alternatives for the I-710 corridor. The I-710 Corridor Project EIS/EIR will study 18 miles of the I-710 Freeway between the Ports of Long Beach and Los Angeles and the Pomona Freeway (SR-60).
II. Development of the Corridor Aesthetic Theme
The Formation of the I-710 Aesthetics Committee

Composition of Committee
- Caltrans
- Local City/County Representatives
- Metropolitan Transportation Agency
- Council of Governments (COG)

Function of the Committee
- Provide background information and community preferences for design
- Develop and approve the aesthetic corridor theme

Coordination of Meetings and Tasks - Caltrans
- Caltrans develops and designs aesthetic treatments consistent with a unified theme for the entire corridor
I-710 Corridor Aesthetic Master Plan
Aesthetics Committee Decision Making Flowchart

Start

- Caltrans identifies site elements to be analyzed
- Committee provides design input for theme(s)
- Caltrans develops route theme option(s)
- Caltrans presents theme option(s) to Committee

Yes: Consensus reached & route theme approved

- Record theme decision
- Final CMP

No: Committee revisits design input & Caltrans modifies design theme

- Caltrans prepares Draft CMP
- Draft CMP ready for public review & approval

I-710 Corridor Aesthetic Master Plan
Establish the Purpose, Goals, and Strategies

Purpose

Plans Corridor Visual Quality: The Corridor Aesthetics Master Plan for Theme Development (CMP), serves to plan the visual quality of the I-710 transportation corridor. Thereafter, any future transportation project, within the corridor, shall have an accompanying document which identifies the appearance of planned physical elements, and structures; which when fully implemented, shall develop the communities’ overall vision for the I-710. The CMP is significant because it involves local public agencies in the planning process; and will represent the State and its people.

Creates Context Sensitive Design: The CMP incorporates Caltrans policies of Context Sensitive Design Solutions; to plan, design, maintain, and operate its transportation system in a way that reflects and enhances the surrounding environment, while meeting Caltrans transportation goals and policies.

Develops Corridor “Design Theme“: Guides new highway design by developing comprehensive urban design and aesthetic “themes” for the transportation corridor.

Guides Hardscape Component Design: Guides the designer for architectural and aesthetic treatment of the I-710 character defining features, e.g., lighting, bridge rail design, fencing, superstructures, column design, retaining and sound wall design, etc.
Goals

• To Provide a Conceptual Design Concept Comprised of a Continuous, Unified, and Enhanced Visual Experience Along the Corridor.

• To Promote Transportation Safety and Management Efficiency.

• To Advocate Cooperation and Communication with Regional, Local, and Public Participants.

• To Minimize Environmental and Social Impacts.

• To Facilitate Protection and Restoration of the Corridors Natural, Environmental, and Cultural Heritage.

• To Leave a Lasting Public Works Legacy.
I-710 Corridor Aesthetic Master Plan
Establish the Purpose, Goals, and Strategies

Strategies

• The I-710 CMP is a policy document to be used by Caltrans, public agencies, and stakeholders involved in the design and construction of improvements within the freeway right-of-way.

• The I-710 CMP provides conceptual images for the structural design elements and its components utilizing the Modern theme for the corridor.

• Projects in all phases will be reviewed for consistency with the CMP. Modifications and further detail will be required and will be added to this document after agreement between Caltrans and the sponsoring agency.

• Improvements requiring a Caltrans permit will be reviewed for application of and consistency with the CMP and will require approval to proceed by the District 7 Landscape Architect.
I-710 Corridor Aesthetic Master Plan
Process and Methodology for Developing the Corridor Theme -
Using Context Sensitive Solution (CSS) Policy

Caltrans policy:

• “The Department uses “Context Sensitive Solutions (CSS)” as an approach to plan, design, construct, maintain, and operate its transportation system. These solutions use innovative and inclusive approaches that integrate and balance community, aesthetic, historic, and environmental values with transportation safety, maintenance, and performance goals. CSS are reached through a collaborative, interdisciplinary approach involving all stakeholders.” (Director’s Policy DP-22, Context Sensitive Solutions).

• CSS Purpose: Development of transportation design highway elements and structures that are responsive to local values and concerns, through involvement of stakeholders, early in the planning stage. These interventions provide consistency and unity in the appearance and image of the route, through application of corridor aesthetic themes; while enhancing individual community identities.
I-710 Corridor Aesthetic Master Plan
Process and Methodology for Developing the Corridor Theme – Site Analysis: The Totality of A Particular Place: The Visible & The Invisible

THE ANALYSIS OF THE SITE, MATERIALS, & FORMS, AS THEY ARE REALIZED IN THE LANDSCAPE, IS A PROCESS THAT ENGENDERS A QUALITATIVE STANCE TO BEGIN DESIGN; THUS ANCHORING DESIGNED AND BUILT STRUCTURES WITHIN THE LOGIC OF THE COMMUNITY.

I-710 Corridor Aesthetic Master Plan
Process and Methodology for Developing the Corridor Theme -
Aesthetics Committee Collaboration

• **Aesthetics Committee Members Participate in Theme Surveys and Data Collection (Analysis)**
  
  • Members are asked to participate in surveys of societal and physical values, that would reveal the “origins,” of the I-710 corridor communities, in a positive manner. The survey, with a view towards the future, inventories the historical establishment of cultural and visual resources, as well as the physical and aesthetic development of the study area.

  • Committee team building exercises that assess the existing historical, natural, and man-made landscape of the I-710 corridor.

• **Caltrans Integrates and Implements Theme Coordination (Synthesis)**

  • Lead responsibility for physical design of state highway components.

  • Charged with integrating aesthetic features into corridor projects, including treatments for bridges, median barriers, walls, fencing, and sound wall design.

  • Charged with highway design policy enforcement; thus, traveler and worker safety are the highest priority in designing the state highway system.
I-710 Corridor Aesthetic Master Plan
Process & Methodology for Developing the Corridor Theme - Aesthetics Committee Collaboration – Theme Survey & Data Collection
I-710 Corridor Aesthetic Master Plan
Developing Aesthetic Treatment Options and Themes
Structural Design Elements: Aesthetic Hardscape Components

The following are structural design elements within a highway corridor that could have theme or aesthetic treatment to and items which Caltrans has previously designed aesthetics for statewide. Examples of Caltrans designed structural design elements are presented in the following pages and include:

- Bridge Structures
  - Overcrossings (OC)
  - Undercrossings (UC)
  - Pedestrian OC/UC
  - Viaducts
  - Interchanges

- Bridge Abutment Faces

- Bridge Columns/Bents

- Outrigger Bents

- Bridge Barriers

- Light fixtures
  - Slope Paving
  - Wing Walls
  - Sound Walls
  - Sound Wall Pilasters
  - Retaining Walls
  - MSE Walls

Upon completion of each phase, a Maintenance Agreement shall be determined between Caltrans, Local Cities and Agencies on maintenance roles and responsibilities.
I-710 Corridor Aesthetic Master Plan
Developing Aesthetic Treatment Options and Themes
Structural Design Elements: Bridge Examples

Bridge Structures
Bridge design along the I-710 corridor will mostly consist of typical two span highway overcrossings where both ends of the structure can be viewed by approaching traffic at one time. Treatment on bridges at local intersections shall comply with typical structural design standards. Where designated, sound walls located on top of structures will have consistent color accents on both bridge and sound wall.
Columns
Columns should appear to support the structure as simply as possible. The proportion of elements is important. The goal is a balance between the apparent mass of the superstructure and the size of the column. Columns that are too thin will look too spindly and columns that are too thick will look too squat.

Developing Aesthetic Treatment Options and Themes
Structural Design Elements: Bridge Abutments & Wing Wall Examples

Atascadero, Route 101
Norwalk, Route 5
Norwalk, Route 5
San Bernadino, Route 215
I-710 Corridor Aesthetic Master Plan
Developing Aesthetic Treatment Options and Themes
Structural Design Elements: Slope Paving Examples

**Slope Paving**
The selection of materials under bridges can be varied. Colored pavers with rock blankets or unit pavers can be designed to be compatible with the established corridor color palettes, textures, and themes. Alternative slope paving treatments for surfaces facing the community could include artistic relief sculptures, patterns, murals, etc.
I-710 Corridor Aesthetic Master Plan
Developing Aesthetic Treatment Options and Themes

San Marcos, Route 154
Feather River – Yuba City, Route 99
La Conchita, Route 101
I-710 Corridor Aesthetic Master Plan
Developing Aesthetic Treatment Options and Themes
Structural Design Elements:
Bridge Lighting and Pedestal Examples
Retaining Walls
Retaining walls within the corridor shall have textured form lined surfaces; utilizing both typical and customized textures and patterns. The form liner method affords flexibility for innovative design, as well as adding interest to retaining wall surfaces.

III. Design Guidelines
I-710 Corridor Aesthetic Master Plan
Design Guidelines

Design Guideline Benefits

• Create Safe Design Solutions
• Unify Freeway Corridor Improvements
• Integrate Roadway Aesthetic Treatments
• Enhance Natural and Human Environments
• Ensure Safe, Maintainable, Durable Highway Design
• Leave a Lasting Public Works Legacy
• Fulfill Public Expectations
• Provide an Interdisciplinary Design Team
• Provide Stewardship of Natural Resources
Safety and Maintenance Considerations

- Visually Distracting Aesthetic Treatments
- Clear Recovery Zones
- Use of Veneers Over the Roadway
- Vandalism / Graffiti
- Reduced Worker Exposure
- Use of Materials
- Adequate Shoulder Width
Environmental Considerations

• Introduce Aesthetic Treatments which Compliment the Existing Surroundings

• Aesthetics and Structure Design Coordination for Varying Environmental Conditions

• Coordination of Aesthetic Design for Integration with Existing Structures

• Geological Constraints
I-710 Corridor Aesthetic Master Plan
Design Guideline Considerations

Historical and Cultural Considerations

• Regional Historical Context
• Archaeological Impacts
• Industrial/Agricultural Heritage
• Historic Landmarks
Aesthetic Structure Design Considerations

- Provide visual continuity and a unified experience for the driver, from the coastal city of Long Beach to East Los Angeles to the north.
- Bridge concrete barriers and railing shall contribute to the visual continuity of the travel way.
- Select a distinctive light standard design that is compatible with the lines and shapes of the proposed aesthetic theme for structures and that reflects an artistic solution for pole lighting.
- Travel way appurtenances shall exhibit simple design language that unifies various travel way components (e.g., bridge rails, abutments and security fencing).
- The form and surfacing of all vertical elements such as abutments, bridge superstructures, columns, retaining walls and sound walls along the travel way, shall exhibit a consistent aesthetic treatment and style (e.g., Modern)
IV. Conceptual Corridor Aesthetics

Modern Theme

During the course of this process it has been determined the “Modern Theme” will be the concept for the I-710 corridor. Conceptual images representing the “Modern Theme” for all structural elements as described previously is portrayed in the following pages. Further detail of these elements will need to be documented and have concurrence by Caltrans, Metro and the Cities throughout each stage of the project.

V. Sound Walls
Sound Wall Program & Design Criteria:

• Construction meets State and Federal requirements.

• Sound wall aesthetics and design to receive close coordination between the Department and local communities throughout the life of the project.

• Sound wall to use split face block with vertical score border, custom pilaster.

• Sound wall color to be ‘tan’. Referee samples shall be made available to Department and local communities for approval of final color during design phase and documented in this report.

• Existing walls to be stained or colored to match new additional block color.

• Vines, shrubs, trees and groundcover shall be planted on the back or front of new and existing sound walls where feasible.
Rte 710 Corridor Aesthetic Master Plan

Sound Walls: Block Types

- Precision block
- Vertical score block
- Split face block
- Slump Block

- 1/3 new wall, 2/3 existing wall
- 4 to 6 feet added atop existing walls in some locations

Metro

Tan Color Split Face Block, Vertical Score Border, and Custom Pilaster

The images will be determined by the Cities, Caltrans and Metro during the design phase of this project.
Rte 710 Corridor Aesthetic Master Plan
Conceptual Sound Walls: “Traditional” Design Scheme:
Tan Color Split Face Block, Vertical Score Border, and Custom Pilaster

Placement of two vines per plant hole is highly recommended. Core holing for vines has shown not an effective method and not a recommended option.
