

were designed to legally and financially assist cities to address problems of decay and neglect within their communities. In response to this new legislation, the Community Redevelopment Agency of the City of Los Angeles (CRA) was established in 1948, in part to cure economic "blight" by funding and overseeing redevelopment. As its first major project, the CRA sought to improve the Bunker Hill area, which had been one of the more exclusive residential neighborhoods at the turn of the twentieth century but had deteriorated and fallen out of fashion. Despite many proposals, plans to redevelop Bunker Hill were rejected, and ultimately not begun until the 1960s, when large hotels and Victorian-era homes were bulldozed and the landforms were rearranged. Slowly, over the past 50 years, a community of high-rises has been constructed in their place (Kawaratani 2008).

When the Harbor Freeway (Interstate-110) was completed in 1952, it was hopefully called "downtown's new Main Street" by noted local architect A. C. Martin, Jr. (Los Angeles Times 1967). Construction of the freeway and the repeal of the building height ordinance in 1954 created a significant new concentration of high- and midrise buildings, eventually concentrated on Figueroa and 7<sup>th</sup> Streets.

The downtown civic center began to take shape in the post-war era. As discussed in *California: A Land of Contrast*:

Business blocks of the late nineteenth century have been replaced by the Civic Center, whose buildings, most of contemporary design, are flanked by multi-acre parking lots. The Civic Center has encroached westward upon Bunker Hill, once occupied by the city's wealthier residents and now experiencing impressive [redevelopment] (Lantis, et al. 1973).

The resulting Civic Center plan, adopted in 1947, has an east-west axis and is roughly bounded on the north by Aliso Street, on the south by 2<sup>nd</sup> Street, Grand Avenue to the west, and Alameda Street on the east side.

A new police facilities building was constructed on two city blocks formerly occupied by shops and residences in Little Tokyo. The new police building (Property 6-6, 150 North Los Angeles Street, constructed in 1955) was expected to "revolutionize the design of law enforcement buildings" and was designed by Welton Becket and Associates and J. E. Stanton. The new building consolidated activities that were previously scattered throughout the city and provided a modern anchor for the eastern terminus of the expanded civic center (Los Angeles Police Department, no date).

Additional contributions to the Civic Center included the Courthouse in 1958 (Property 5-7); the County Hall of Records in 1962 (Property 5-9, 320 West Temple Street, Richard Neutra and Robert Alexander); the City Department of Water and Power building in 1965 (Property 5-1, 111 North Hope Street, Albert C. Martin & Associates); the Federal Office Building in 1966

(Property 6-5, 300 North Spring Street, Welton Becket); and the Music Center (Properties 5-2, 3, 4) 135 North Grand Avenue, Welton Becket), containing the Dorothy Chandler Pavilion (Property 5-4, completed in 1964), the Mark Taper Forum, and the Ahmanson Theatre (Properties 5-3 and 5-2, both constructed in 1967).

Within Little Tokyo, redevelopment efforts began as early as the 1960s when local Japanese-American businessmen initiated a \$50 million rejuvenation plan that sought to control urban renewal and protect the unique community atmosphere. A number of office and retail buildings as well as banks and hotels were developed under this effort (Hebert 1965). Redevelopment efforts within Little Tokyo continued into the 1970s and 1980s under the management of the CRA, which implemented an aggressive improvement plan that unwittingly destroyed most of the old vestiges of the community. Little Tokyo was dramatically shifting from a quaint enclave of low- and midrise buildings into a mixed-use area of large-scale commercial high-rises, hotels, and shopping centers, including Weller Court (123 Weller Court, constructed in 1982) and Japanese Village Plaza (350 East 1<sup>st</sup> Street, constructed in 1978).

Efforts to combat redevelopment in 1986 succeeded with listing the Little Tokyo Historic District in the National Register of Historic Places (Properties 7-7 through 7-19). In 1995, the District received the higher distinction of being designated a National Historic Landmark (NHL) district. In 1990, artist Sheila de Bretteville was commissioned by the City of Los Angeles' CRA to design a public art exhibit to showcase the history of the Little Tokyo Historic District. Working in collaboration with Japanese-American artists and assistants, the Little Tokyo 1<sup>st</sup> Street public art initiative took four years to create and the final design was approved by community members and local agencies. Completed by 1996 the decorative terrazzo with concrete sidewalk designs depict images of Japanese-American culture, personal testimonials (transcribed in English and Japanese), and historic names and tenants for each building in the district. The resulting Omoide no Shotokyo (Remembering Old Little Tokyo) installation includes an oversized replica of the camera used by photographer Toyo Miyatake to capture images documenting the Manzanar Internment Camp (Hayden 1996).

One of the most recent hallmarks of the Civic Center, the Walt Disney Concert Hall (Property 4-4), was completed in 2003. It was built in stages, funded through a public-private partnership, to serve as the new home for the Los Angeles Philharmonic Orchestra. It was completed at a reported cost of nearly \$300 million, after 16 years of funding and construction challenges. Designed by Frank O. Gehry, in collaboration with Japanese acoustician Yasuhisa Toyota, it was applauded for its state-of-the-art acoustics.

The development of downtown Los Angeles continued throughout the twentieth century and beyond, surviving peaks and valleys in the real estate market. Recent trends have included conversion of historically significant, vacant office and residential hotel buildings to residential apartment and condominium uses. This movement has brought an entirely new

residential population to downtown and has encouraged the development and reintroduction of additional services and improvements. Although the inevitable problems that gentrification brings have been part of the revitalization of downtown, it has nonetheless invigorated what was recently a collective nine to five streetscape. New services include the completion of the Red, Blue, and Gold line transit systems in the 1990s, and redevelopment of the Convention Center area. The addition of Staples and Nokia Centers with these other factors has all worked toward returning downtown to a more animated character, with a less commuter-focused economy.

## 4.2 California Historic Resources Information Literature Search (CHRIS)

SWCA conducted a cultural resources records search for the Regional Connector Transit Corridor project at the California Historical Resources Information System (CHRIS) South Central Coastal Information Center (SCCIC) on February 10, 2009 in Fullerton, CA (Appendix B). Subsequent requests for information were made in March, April, and May 2009 and in January 2010. The records search included a review of the available documents and site records within a 0.25-mile radius of the project area. In addition to official maps and records, the following sources of information were consulted as part of the records search:

- National Register of Historic Places – Listed Properties (2006, updated to present)
- California Register of Historical Resources (2006, and review of minutes from State Historic Resources Commission meetings thereafter)
- California Inventory of Historical Resources (1976)
- California State Historical Landmarks (1996 and updates)
- California Points of Historical Interest (1992 and updates)
- Office of Historic Preservation Historic Property Directory and Determinations of Eligibility (2008)
- Survey of Surveys: A Summary of California's Historical and Architectural Resource Surveys (1986)
- Five Views: An Ethnic Sites Survey for California (1988)

The records search focused on obtaining information on private and public lands located within a 0.25-mile search radius of the project alignment.

### 4.2.1 Previous Studies in 0.25-mile Radius of APE

Downtown Los Angeles has been the subject of a large number of cultural resources studies in the last three decades. The SCCIC records search identified 143 prior cultural resources studies within a 0.25-mile radius of the direct APE. Twenty-three of the studies are located within the direct APE and 12 studies are adjacent to the direct APE (Table 4-1).

**Table 4-1. Prior Cultural Resources Studies Within or Adjacent to the Direct APE**

#### 4.2.2 Previously Recorded Built Environment Resources within 0.25 miles Radius of Project APE

The SCCIC records search revealed 47 previously recorded built environment resources in the APE (Table 4-2). The majority of these resources were built in the early years of the twentieth century. Of these 47 resources, 33 were listed in, determined eligible for listing in, or found eligible for listing in the National Register. An additional three were listed in, determined eligible for listing in, or found eligible for listing in the California Registers. One of the resources is a designated California Historical Landmark. The remaining 10 properties were found not eligible for National or California Register-listing. Of the 47 previously recorded properties in Table 4-2, six resources were found in this survey to be no longer extant and one evaluation was found to have likely been made in error. Therefore, there are a total of 29 previously recorded properties that are listed in or eligible for listing in the National and/or California Registers.

Table 4-2 lists previously identified properties, including those listed in, determined eligible for listing in, or found eligible for listing in the National or California registers, otherwise recognized by the state or locally designated.

### 4.2.3 Recently Evaluated Built Environment Resources within a 0.25 Mile Radius of Project APE

Table 4-3 lists the 18 properties in the APE that were recently evaluated for the National and California Register eligibility as part of the Grand Avenue Project DEIR Technical Report (PCR Services Corporation 2006). Of these 18 properties, 13 were found eligible for listing in the National or California Registers. This survey, which identified the Los Angeles Civic Center Historic District, was not included in records on file at the SCCIC, and no California Department of Parks and Recreation (DPR) 523 forms were on file for the properties. Many of the buildings in the survey were found to “appear eligible for the National Register as an individual property through survey evaluation.” The Civic Center complex was found to “appear eligible for the California Register as a contributor to a California Register-eligible district through survey evaluation.” No evidence was found to demonstrate SHPO concurrence with the findings.

Los Angeles City Hall was recently determined eligible for listing in the National Register through the Section 106 process and is therefore listed in the California Register. City Hall was also found to be a contributor to the California Register-eligible Civic Center district.

#### 4.2.4 Structures within the APE

The following 24 structures, including bridges, pedestrian overcrossings (POCs) and pedestrian undercrossings (PUCs), are in or cross the boundaries of the project APE (Table 4-4). One bridge within the APE was constructed prior to 1968; the 1<sup>st</sup> Street Viaduct (1929) was previously determined eligible for listing in the National Register. The remaining twenty-three structures within the APE were constructed after 1968 or were not found to be exceptionally significant, under Criteria Consideration G.

## 4.3 Built Environment Survey

The built environment survey methods were described in Section 3.4.2.

### 4.3.1 Survey Results

The proposed APE includes a total of 289 properties. Appendix A lists all of the properties within the APE that were surveyed for this project. Of those, there were 118 buildings, structures, or objects that were constructed more than 50 years before the assumed project construction date of 2018. Of the 118 properties, 29 were previously listed in or determined eligible for the National and/or California Registers (Table 4-2). DPR forms were not prepared for those properties unless current conditions necessitated updating, because of changes in improvements or if improvements were no longer extant. The remaining properties in the APE that were built in or prior to 1968 and have not been listed in or determined eligible for the National and California Registers required evaluation for historical significance. Those properties are discussed in Section 4.3.2.

### 4.3.2 Significance Evaluations

A total of 118 resources, including buildings, structures, and objects were either previously identified or investigated for this project. California DPR series 523 forms were prepared for each property containing improvements completed in or before 1968 that were not previously listed in or determined eligible for the National and California Registers to evaluate their National and California Register eligibility. The results of those evaluations, in support of this section, are included in Appendix D.

Table 4-5 shows the 85 properties that contain improvements completed in or prior to 1968, according to Los Angeles County tax assessor records and/or building permits, and that were re-evaluated or evaluated for historic significance. The DPR 523 forms for these properties are included in Appendix D. Also included in Table 4-5 are properties that fall within the APE but do not have specific APNs. One building, Walt Disney Concert Hall, was completed in 2003, but meets Criteria Consideration G for properties that have achieved significance in less than 50 years and has therefore been included in the table. The Los Angeles Civic Center District was found eligible for listing in the National and California Registers for this project. Properties that are located within the district and that were built after 1968 were also evaluated for historical significance and therefore included in the table. Table 4-5 depicts resources that were evaluated or re-evaluated for National and California Register eligibility.

Of the total 118 resources that were investigated for this project, 48 were found to be listed in or eligible for listing in the National and California Register. Seven were found eligible for listing only in the California Register, and 63 resources were found to be ineligible for either listing. Figure 4-4 shows eligible historic properties and historical resources within the APE. Table 4-6 outlines all of the resources (previously recorded and evaluated for this project) that are listed in or eligible for listing in the National and/or California Registers.

## 5.0 IMPACTS

The impacts analysis examined likely effects of the proposed project to historic properties under NHPA and impacts to historical resources under CEQA. This analysis incorporates the findings of other applicable technical studies, including displacement, right-of-way, noise and vibration studies, sound walls, retaining walls, geotechnical studies, and station designs. Tables 5-1 through 5-8 list the potential project effects to historic properties and impacts to historical resources by alternative. A discussion of the potential effects to historic properties and impacts to historical resources under the No Build Alternative and the TSM Alternatives are included in the text.

As noted previously in Section 3.0 of this technical memorandum, if a project affects a “historic property” within the APE, the lead federal agency must assess whether the effect is adverse in order to comply with Section 106 of the NHPA. This is accomplished in consultation with the SHPO by applying the “criteria of adverse effect” as stated in 36 CFR 800.5(a)(1).

If a project’s effects do not diminish the integrity of a historic property, then a “no adverse effect” finding is appropriate (36 CFR 800.5(b)). Adverse effects are defined in Section 3.2.

If an adverse effect is expected to occur as a result of a proposed project, the lead agency shall consult further to resolve the adverse effect, pursuant to 36 CFR Part 800.5(2) and develop and evaluate alternatives or modifications to the undertaking that could avoid, minimize, or mitigate adverse effects on historic properties (36 CFR Part 800.6).

Section 110(f) of the NHPA of 1966, as codified in 36 CFR 800.10, requires federal agencies to undertake planning and actions to minimize harm to designated National Historic Landmark (NHL) properties. If a proposed project is found to have the potential for an adverse effect on a NHL, the Secretary of the Interior (typically represented by a representative of the National Park Service) is invited to participate under Section 110(f) of the NHPA. For this project, the Little Tokyo Historic District NHL is situated within the APE and would not be adversely affected by any of the alternatives. If project planning necessitates changes, and potential adverse effects to the NHL arise, consultation with the National Park Service will be conducted.

As noted in Section 3.0, CEQA also requires that proposed public projects be evaluated for their probability to cause significant effects on “historical resources.” CEQA equates a “substantial adverse change” in the significance of a historic property with a significant effect on the environment (PRC Section 21084.1). Thresholds of substantial adverse change are established in PRC Section 5020.1, and include demolition, destruction, relocation, or “alteration activities that would impair the significance of the historic resource.”

## **5.1 No Build Alternative**

### **5.1.1 Construction Impacts**

The No Build Alternative would not result in short-term or long-term construction related effects to historic properties or impacts to historical resources. This alternative does not include capital improvements, and thus would not result in construction or implementation-related effects to historic properties under NEPA or impacts on historical resources under CEQA within the project APE.

### **5.1.2 Operational Impacts**

The No Build Alternative would not result in operational short- or long-term effects to historic properties or impacts to historical resources. This alternative would not result in the introduction of any new improvements that would be expected to cause effects on historic properties under NEPA or have impacts under CEQA on historical resources in the project APE.

### **5.1.3 Cumulative Impacts**

The No Build Alternative would not result in cumulative effects to historic properties or impacts to historical resources, other than the current effects on resources though continued high and escalated levels of vehicular traffic, unabated by additional mass transit options. Therefore, the No Build Alternative would not contribute to a cumulative effect to historic properties or impacts to historical resources.

## **5.2 Transportation System Management (TSM) Alternative**

Under the TSM Alternative, the transit infrastructure investment (two new bus routes and associated structures) would use the existing street and sidewalk networks and would not require the displacement or relocation of properties, residents, or employees.

Improvements under this alternative would entail minor physical modifications, such as the installation of bus stops along existing city streets and rebuilding some curbs, sidewalks, and street surfaces to accommodate increased bus weights and traffic frequency.

No detailed engineering plans for the TSM alternative have been prepared to date.

### **5.2.1 Construction Impacts**

#### **5.2.1.1 Addition of Bus Stops**

Under the TSM Alternative, an unspecified number of buses would be added throughout the APE. Installation of up to six new bus stops within the APE would entail minor alterations to the sidewalks, curbs, and other features in the public right of way.

### **Section 106 Effects Analysis for Historic Properties**

An effect, but no adverse effect, to historic properties would result from the addition of bus stops because the current streetscapes were historically busy transportation corridors. The new proposed features would not alter the characteristics of historic properties located in the APE in a manner that would diminish the integrity of any historic materials.

### **CEQA Impact Analysis for Historical Resources**

The addition of a limited number of bus stops in the APE would not constitute a substantial adverse change that would impair the significance of historical resources. The resources' features would remain to convey their significance. The project, therefore, would have a less than significant impact upon historical resources.

#### **5.2.1.2 One-Way Express Bus Traffic**

The construction and implementation of the TSM Alternative may result in the rebuilding of curbs, sidewalks, and street surfaces to accommodate increased bus weights and traffic frequency.

### **Section 106 Effects Analysis for Historic Properties**

The improvements to facilitate bus traffic would result in an effect, but no adverse effect, to historic properties because the current streetscapes were historically busy transportation corridors. The changes would not alter a characteristic of a historic property in a manner that would diminish the integrity of the property's location, design, setting, materials, workmanship, feeling, or association.

### **CEQA Impact Analysis for Historical Resources**

The potential changes to sidewalks and street surfaces to accommodate bus traffic would not constitute a substantial adverse change that would impair the significance of historical resources. The majority of the resource's features would remain to convey their significance. The TSM Alternative, therefore, would have a less than significant impact upon historical resources.

#### **5.2.1.3 Noise and Vibration**

According to the Noise and Vibration Technical Memorandum, the TSM Alternative may include minor construction, i.e. install new bus stop benches and signage. These activities would take less than a day to erect, require no heavy equipment, and would not exceed ambient levels of noise in the APE. Noise generated by this alternative is not expected to cause an adverse effect to historic properties or a significant impact to historical resources.

For the TSM Alternative, no major construction activities that use the larger equipment in Table 3-2 are planned, therefore no adverse effects or significant impacts under CEQA from ground borne vibration (GBV) are anticipated.

## **Section 106 Effects Analysis for Historic Properties**

Selecting construction techniques that use specified equipment within safe distances from sensitive buildings would diminish the potential for ground borne vibration and noise. Large equipment would not adversely affect historic properties. Potential noise would also not rise above existing conditions. Any changes that could occur as a result of GBV or noise generated by this alternative would not alter a characteristic of a historic property in a manner that would diminish the integrity of the property's location, design, setting, materials, workmanship, feeling, or association.

### **CEQA Impact Analysis for Historical Resources**

The potential changes generated by GBV and noise for this alternative would not constitute a substantial adverse change that would impair the significance of historical resources. The resources' features would remain to convey their significance. The project, therefore, would have a less than significant impact upon historical resources.

## **5.2.2 Operational Impacts**

### **5.2.2.1 Noise and Vibration**

Under the TSM Alternative, potential sources of future noise and vibration levels would not increase over the existing sources of noise and vibration. Buses currently use the routes associated with this alternative. Therefore, the operation of additional buses along the proposed route would not result in a noticeable increase in vibration or noise levels over those currently generated by existing buses. Additional bus use may reduce cumulative noise by decreasing personal vehicle use.

## **Section 106 Effects Analysis for Historic Properties**

Noise and vibration caused by the operation of buses would not adversely affect historic properties in the APE. Potential changes would not alter the characteristics of a historic property in a manner that would diminish the integrity of the location, design, setting, materials, workmanship, feeling, or association.

### **CEQA Impact Analysis for Historical Resources**

Potential noise and vibration generated from bus service in the APE would not constitute a substantial adverse change that would impair the significance of any historical resources. Character defining features would remain to convey the significance of the historical resources. The TSM Alternative, therefore, would have a less than significant impact upon historical resources.

## **5.2.3 Cumulative and Indirect Impacts**

There are no expected indirect impacts under the TSM Alternative.

Cumulative effects and impacts include short-term effects during construction such as noise, dirt, changes in setting from the use or storage of equipment, or lack of access due to congestion or revisions in traffic patterns. Cumulative effects may also result from long-term effects such as additional traffic brought about by increased density as new buildings are constructed. Taken collectively, the reasonably foreseeable projects in the project area do not appear to have additional effects upon historic properties or impacts upon historical resources that would be affected by the TSM Alternative.

#### **5.2.4 Potential Effects to Section 4(f) Resources**

Section 4(f) applies to the Regional Connector Transit Corridor project because several of the project alternatives potentially affect 4(f) properties. The TSM Alternative, however, would not affect, displace, alter, or use any 4(f) properties to implement construction and/or project operation.

### **5.3 At-Grade Emphasis Light Rail Transit (LRT) Alternative**

The At-Grade Emphasis LRT Alternative would install double-track light-rail guideways in the existing street system, rebuild street surfaces and underground utilities, rebuild curbs and sidewalks, and install stations, all within the APE. Underground segments of the alternative would use parts of the existing 2<sup>nd</sup> Street Tunnel (APE Map # 4-3) and would require new cut and cover tunneling under Flower Street between 7<sup>th</sup> and 4<sup>th</sup> Streets north of the 7<sup>th</sup> Street/Metro Center Station.

#### **5.3.1 Construction Impacts**

Construction activities were analyzed using the Criteria of Adverse Effect for their potential to impact properties. The following discussion describes the types of effects that may occur in the APE due to construction activities for the At-Grade Emphasis LRT Alternative. Short-term effects from construction typically result from dirt, changes in the visual environment, or alteration to access. Other types of construction effects may be related to specific construction activities or locations. Operational effects are discussed in Section 5.3.2. Table 5-1 indicates the resources that may experience construction-related effects due to their location within the APE.

##### **5.3.1.1 Temporary Dirt/Unintended Damage**

Properties in the APE may experience effects from construction including dirt and unintended damaged. Metro would employ best management practices (BMPs) to ensure that these effects are short-term.

#### **Section 106 Effects Analysis for Historic Properties**

Dirt and other damage from construction would result in effects, but not adverse effects, to historic properties in the APE because the effects would be short-term. The effects would not

directly alter a characteristic of historic properties in a manner that would diminish the integrity of the properties' location, design, setting, materials, workmanship, feeling, or association.

### **CEQA Impact Analysis for Historical Resources**

Potential dirt and other unintended damage during construction would not constitute a substantial adverse change that would impair the significance of the historical resources. The impacts would be short-term and the majority of the resources' features would remain to convey their significance. This alternative, therefore, would have a less than significant impact upon historical resources.

#### **5.3.1.2 Traffic Congestion/Parking/Access**

Changes in access to properties and resources within the APE may result from road closures, use of equipment, and other construction activities. Metro would employ BMPs to minimize these changes and keep the public and property owners informed of potential issues.

### **Section 106 Effects Analysis for Historic Properties**

Potential effects, but no adverse effects, would result from changes in access during construction. The effects would be short-term and would not alter characteristics of historic properties in a manner that would diminish the integrity of the properties' location, design, setting, materials, workmanship, feeling, or association.

### **CEQA Impact Analysis for Historical Resources**

Changes in access resulting from congestion and loss of parking during construction would not constitute a substantial adverse change that would impair the significance of the historical resources. The impacts would be short-term and the majority of the resources' features would remain to convey their significance. The At-Grade Emphasis LRT Alternative, therefore, would have a less than significant impact upon historical resources.

#### **5.3.1.3 Visual**

Visual changes may result from the storage and operation of equipment, cuts in the road, and signage used during construction. Metro would employ best management practices (BMPs) to minimize these changes and they would be short term.

### **Section 106 Effects Analysis for Historic Properties**

Visual changes during construction would result in an effect, but not an adverse effect, to historic properties because the effects would be short-term. The changes would not directly alter a characteristic of historic properties in a manner that would diminish the integrity of the properties' location, design, setting, materials, workmanship, feeling, or association.

### **CEQA Impact Analysis for Historical Resources**

Visual changes during construction would not constitute a substantial adverse change that would impair the significance of historical resources. The impacts would be short-term and the resources' character-defining features would remain to convey their significance. The At-Grade Emphasis LRT Alternative, therefore, would have a less than significant impact upon historical resources.

#### **5.3.1.4 Demolition, Partial Takes or Alteration of a Property:**

As part of the At-Grade Emphasis LRT Alternative a portion of several properties may be acquired (partial takes). Portions of properties occupied by the Los Angeles Police Facilities Building (APE Map #6-6), Motor Transport Division Building (APE Map #6-7), and City Health Building (City Hall South) (APE Map #6-4), three contributing resources to the Los Angeles Civic Center Historic District, would be acquired to accommodate new stations (Metro 2010). A temporary construction staging easement would also be acquired. A portion of the CRHR eligible "Tinkertoy" Parking Structure (APE Map #6-8), would be acquired to accommodate the turning radius as the rail line joins the existing Gold Line Extension tracks. Drive way access would also be potentially limited. The Tinkertoy Parking Structure is not eligible for the NRHP.

### **Section 106 Effects Analysis for Historic Properties**

There are no adverse effects to historic properties under this alternative from partial property acquisitions. Since only a portion of the properties would be acquired and converted to new uses, the change would not affect the physical buildings, the historic district that they are a part of, or the characteristics that make them eligible for the NRHP, and thus would not diminish their integrity of location, design, setting, materials, workmanship, feeling, or association.

### **CEQA Impact Analysis for Historical Resources**

Partial property acquisitions would not constitute a substantial adverse change that would impair the significance of historical resources in the APE. The characteristics that make the historical resources eligible for the CRHR and NRHP would remain to convey their significance. This alternative, therefore, would not have a significant impact upon historical resources.

#### **5.3.1.5 Above-Ground Station Construction**

One potential at-grade station is proposed for the At-Grade Emphasis LRT Alternative. The proposed station would be a one-way couplet located on Main and Los Angeles Streets in the NRHP and CRHR Eligible Civic Center Historic District (APE Map #51-1 through 5-13, 6-1 through 7-7, 6-12) and immediately beside three NRHP and CRHR eligible properties; the Los Angeles Police Facilities Building (APE Map #6-6), Motor Transport Division Building (APE

Map #6-7) and City Health Building (City Hall South) (APE Map #6-4). Based upon the preliminary designs, the platforms would be simple poured concrete platforms with modest coverings (IBI Group 2009) similar to what are already used in the nearby Little Tokyo/ Arts District Station.

### **Section 106 Effects Analysis for Historic Properties**

The construction of the proposed at-grade station would result in an effect, but not an adverse effect, to historic properties under this alternative. The proposed changes would not alter the setting of any historic properties in a manner that would diminish either the integrity of the individual properties that are contributors to the historic district or the historic district itself.

### **CEQA Impact Analysis for Historical Resources**

Construction of the proposed station would not constitute a substantial adverse change that would impair the significance of either the Civic Center Historic District or the individual resources that contribute to the district. The historical resources' character-defining features would remain to convey the significance of the Historic District and the individual contributors. This alternative, therefore, would have a less than significant impact upon historical resources.

#### **5.3.1.6 Flower Street Station Entry Construction**

As part of the At-Grade Emphasis LRT Alternative, pedestrian entrances would be constructed to provide access to the underground station on Flower Street. Although not finalized, the initial designs show that escalators would rise from the underground station. A glass canopy, supported by a steel frame, would shelter the opening. The entrances would be located on the east side of Flower Street in areas that provide views of the NRHP and CRHR listed Central Public Library (APE Map #3-2). One entrance would also be located in front of NRHP eligible California Club (APE Map #3-1). A glass enclosed elevator would also be constructed on the southeast side of Flower Street in front of the Maguire Gardens. This elevator would be adjacent to Maguire Gardens, on the west side of the Central Library (IBI Station Planning Report 2009).

### **Section 106 Effects Analysis for Historic Properties**

No adverse effects to historic properties would occur as the result of proposed improvements for the Flower Street Station. Although the improvements are a change to the setting of the California Club and the Central Public Library; the scale, massing, size, and materials of the new facilities would not alter characteristics of any of the historic properties in a manner that would diminish the integrity of the location, design, setting, materials, workmanship, feeling, or association.

### **CEQA Impact Analysis for Historical Resources**

The potential entrances and elevators associated with Flower Street Station would not constitute a substantial adverse change that would impair the significance of historical resources (Central Public Library, see APE Map #3-2; and California Club, see APE Map #3-1). The character-defining features of these resources would remain to convey their significance. This alternative, therefore, would have a less than significant impact upon historical resources.

#### **5.3.1.7 Catenary pole and Wire Installation**

Catenary poles and wires would be installed in the portion of the APE where the trains run at-grade. Catenary poles provide support for the wires that would be suspended overhead. The final spacing, method of installation, and design for the poles and wires has not been established.

### **Section 106 Effects Analysis for Historic Properties**

No adverse effects to historic properties would result from the installation of the catenary poles and wires because the project area streetscapes are historically dynamic and have changed dramatically over time. Changes to the streetscape resulting from the addition of catenary poles and wires as proposed under this alternative are within the range of past changes, and therefore, would not alter historic properties in a manner that would diminish the integrity of any property's location, design, setting, materials, workmanship, feeling, or association.

### **CEQA Impact Analysis for Historical Resources**

The potential changes to install catenary poles and wires under this alternative would not constitute a substantial adverse change that would impair the significance of historical resources. The resources' features would remain to convey their significance. The project, therefore, would have a less than significant impact upon historical resources.

#### **5.3.1.8 Tunnels**

Under this alternative the NRHP eligible 2<sup>nd</sup> Street Tunnel (APE Map #4-3) would be altered. The walls of the tunnel would be partially demolished along its southwest interior wall to construct a new entrance and exit for the new tunnel in which the light rail would run. New elements that would be added to the tunnel include double tracks, catenary wires, and a sidewalk.

The cut and cover trench would also require demolition of a portion of the CRHR eligible Belmont Tunnel (APE Map #3-4). The Belmont Tunnel is not eligible for the NRHP.

### **Section 106 Effects Analysis for Historic Properties**

In applying the criteria of adverse effect for historic properties (36 CFR 800.5(a)(1)) potentially affected by the construction near 2<sup>nd</sup> Street, an adverse effect would occur due to the demolition of a portion of the NRHP eligible 2<sup>nd</sup> Street Tunnel and the subsequent change in use. The changes would directly alter a characteristic of the historic property in a manner that would diminish the integrity of the property's location, design, setting, materials, workmanship, feeling, or association. Documentation of the property in accordance with mitigation measure MM-BE-1 would resolve the potential adverse effect.

### **CEQA Impact Analysis for Historical Resources**

Potential changes to the 2<sup>nd</sup> Street Tunnel would constitute a substantial adverse change that would impair the significance of the historical resource. However, the majority of the resource's features would remain to convey its significance. Additionally, implementation of MM-BE-1 would reduce the impact to a less than significant level. The implementation of MM-BE-1 would reduce any impact to the CRHR-eligible Belmont Tunnel to a less than significant level.

#### **5.3.1.9 Traction Power Substations**

Construction of traction power substations (TPSS) adjacent to the right-of-way along at-grade segments is proposed. The substations deliver electricity to overhead catenary systems. The designs have not been identified but the substations can fit in rooms or standalone buildings of 5,000 square feet or less. The only at-grade location currently identified as a proposed site for a TPSS is on the southwest corner of Spring and 2<sup>nd</sup> Streets. There are no historical resources or historic properties at this location.

### **Section 106 Effects Analysis for Historic Properties**

The proposed location for the TPSS would not be located on or near any historic properties and therefore, there would be no adverse effects to historic properties. If any additional locations are identified, the criteria of adverse effect would be applied to any historic properties that might be affected (36 CFR 800.5(a)(1)). However, because of the small scale of the TPSS, their construction is an effect, but not an adverse effect, that would alter a characteristic of historic properties in a manner that would diminish the integrity of a property's location, design, setting, materials, workmanship, feeling, or association.

### **CEQA Impact Analysis for Historical Resources**

The proposed TPSS location would not be on or near any historical resources and therefore there would be no impact under CEQA. If additional stations are proposed, a CEQA analysis would be conducted. However, due to the small scale of the feature, it is likely that the construction of a TPSS would not constitute a substantial adverse change that would impair the significance of any historical resources. The majority of the resources' features would

remain to convey their significance. The project, therefore, would have a less than significant impact upon historical resources.

#### **5.3.1.10 Differential Settlement**

According to the *Description of Construction*, some of the buildings situated near cut and cover excavation would be susceptible to differential settlement. Differential settlement is defined as “unequal settling of material; gradual downward movement of foundations due to compression of soil which can lead to damage if settlement is uneven” (Allaby 1999).

Differential settlement occurs when a building or feature’s shape is twisted, or is raised and lowered in different places, sometimes imperceptibly. Differential settlement can cause foundations to settle and crack, floors to buckle and go out of level, walls to shift out of plumb and plane, and roofs to twist and deform. The resulting changes in structural systems and cladding or finish materials, including wood and masonry, floor tiles, wood flooring, concrete floors, plaster, marble, and other decorative wall and ceiling treatments, and adobe, stucco, and wood-framed walls can be cracks, fractures, and other noticeable (as well as long term, not immediately visible) deformations and damage. Since historically significant buildings often have archaic construction and finish attachment systems, including unreinforced masonry, those building types are usually more susceptible to the effects of ground-borne vibration than more recently constructed buildings.

According to the *Description of Construction*, at least seven NRHP and/or CRHR eligible properties could be potentially affected by cut and cover construction associated with the At-Grade Emphasis LRT Alternative. These buildings include the Superior Oil Company Building (APE Map #2-13), California Club (APE Map #3-1), 2<sup>nd</sup> Street Tunnel (APE Map #4-3), Walt Disney Concert Hall (APE Map #4-4; CRHR eligible only), the former Nishi Hongwanji Buddhist Temple (APE Map #7-19), Los Angeles Times Building (APE Map #8-2), and St. Vibiana’s Cathedral (APE Map #8-12).

#### **Section 106 Effects Analysis for Historic Properties**

The implementation of design measures would protect and stabilize the ground near historic properties as noted in MM-BE-2, MM-BE-3, and MM-BE-5. These measures would avoid adverse effects to all properties. If properly implemented, short term construction activities would not directly alter a characteristic of the historic property in a manner that would diminish the integrity of the property’s location, design, setting, materials, workmanship, feeling, or association.

#### **CEQA Impact Analysis for Historical Resources**

The potential for differential settlement could constitute a substantial adverse change that would impair the significance of the Superior Oil Company Building (APE Map #2-13), California Club (APE Map #3-1), 2<sup>nd</sup> Street Tunnel (APE Map #4-3), Walt Disney Concert Hall (APE Map #4-4; CRHR eligible only), the former Nishi Hongwanji Buddhist Temple (APE Map

#7-19), Los Angeles Times Building (APE Map #8-2), and St. Vibiana’s Cathedral (APE Map #8-12). The implementation of MM-BE-2, MM-BE-3, and MM-BE-5 would reduce the potential impacts to these historical resources to a less than significant level.

#### 5.3.1.11 Noise and Vibration

Noise generated by construction equipment can cause adverse effects to historic properties and significant impacts to historical resources when exposure exceeds the “severe level” established by FTA. Noise that reaches a severe level, which cannot be reduced through mitigation or other measures, may cause a reduction in use or access to historic properties or historical resources. This may result in an adverse effect to historic properties or a significant impact to historical resources. For properties or resources where a sense of quiet represents a characteristic of its historical significance, increases in noise may also cause adverse effects and/or significant impacts.

According to the Noise and Vibration Technical Memorandum, construction activities with the most potential for noise impacts under the At-Grade Emphasis LRT Alternative, include the cut and cover tunnel along Flower Street, the proposed cut and cover stations at Flower/6<sup>th</sup>/5<sup>th</sup> and 2<sup>nd</sup>/Hope Street, and the Temple and Alameda junction, which includes lowering Alameda Street. To ensure noise impacts are minimized during construction, all construction activities would conform to the provisions in Section 41.40(a) of the City of Los Angeles Code. Furthermore, best management practices (BMPs) would be employed to reduce any potential noise effects to historic properties and result in a no adverse effect finding and reduce potential impacts to historical resources to a less than significant level.

GBV generated by construction equipment can also cause adverse effects on historic properties and significant impacts to historical resources that are in close proximity to construction activities. Construction-related vibration can cause damage ranging from minor cosmetic damage to interior plaster or woodwork damage to major structural damage. Thus GBV can harm the characteristics that make historic properties eligible for the NRHP and historical resources eligible for the CRHR.

For the At-Grade Emphasis LRT Alternative, pre-augering of soldier piles at the cut and cover sections would eliminate the need for impact pile driving. This would leave “Large Bulldozer” and “Drill Rigs” as the main construction vibration sources (Table 3-2). If these large pieces of equipment are not used within the 21 feet of a historic property or historical resource, it is reasonably foreseeable that no adverse effects or significant impacts to historic properties and historical resources from GBV could occur. Buildings near potential construction activities include Barker Brothers (APE Map #2-1), Roosevelt Building (APE Map #2-7), General Petroleum-Mobil Oil Building (APE Map #2-12), Superior Oil Building (APE Map #2-13), California Club (APE Map #3-1), Los Angeles Central Library (APE Map #3-2), 2<sup>nd</sup> Street Tunnel (APE Map #4-3), Mirror Building (APE Map #8-3), Higgins Building (APE Map #8-11,

CRHR-eligible only), Cathedral of Saint Vibiana (APE Map #8-12), Cathedral of Saint Vibiana Rectory (APE Map #8-13).

### **Section 106 Effects Analysis for Historic Properties**

No adverse effects would occur if measures MM-BE-2 and MM-BE-3 are implemented. If these measures are properly implemented, potential effects of the At-Grade Emphasis LRT Alternative would not diminish the integrity of the historic properties' location, design, setting, materials, workmanship, feeling, or association.

### **CEQA Impact Analysis for Historical Resources**

Under the At-Grade Emphasis LRT Alternative, construction-induced vibration could potentially cause a substantial adverse change that would impair the significance of any or all of the historical resources noted in this section. The implementation of MM-BE-2, MM-BE-3, and MM-BE-5 would reduce potential impacts to a less than significant level.

## **5.3.2 Operational Impacts**

The At-Grade Emphasis LRT Alternative would add transit options that would be consistent with the historic use of streetcars within the APE. Additionally, the LRT could benefit historic properties and historical resources in the APE by increasing pedestrian access and use of the area.

Activities associated with the operation of the At-Grade Emphasis LRT Alternative may also cause impacts to properties within the APE. The potential effects are described below and summarized in Table 5-2.

### **5.3.2.1. Traffic Congestion/Parking/Access:**

Operation of the At-Grade Emphasis LRT Alternative may result in loss of parking and changes to vehicular patterns that result in increased congestion.

### **Section 106 Effects Analysis for Historic Properties**

Changes in access, parking, and traffic patterns would result in effects, but no adverse effects, to historic properties. The changes would not alter a characteristic of historic properties in the APE in a manner that would diminish the integrity of the properties' location, design, setting, materials, workmanship, feeling, or association.

### **CEQA Impact Analysis for Historical Resources**

Potential changes to traffic patterns and access would not constitute a substantial adverse change that would impair the significance of historical resources. The majority of the resources' features would remain to convey their significance. This alternative, therefore, would have a less than significant impact upon historical resources.

**Table 5-1. Potential At-Grade Emphasis LRT Alternative Construction Effects**

| APE Map No. | Name  | NRHP Eligibility | CRHR Eligibility | CEQA Evaluation | Right of Way Required | No Historic Properties Affected | Effect-Not Adverse | Adverse Effect |
|-------------|---|------------------|------------------|-----------------|-----------------------|---------------------------------|--------------------|----------------|

| 9-R7        | 1 <sup>st</sup> Street Viaduct (Bridge #53C-1166) | Eligible         | Eligible         | LTS             |                       |                                 | X                  |                |

*Key for CEQA Impacts*

*LTS = Less Than Significant impact, no mitigation required*

*SI = Significant Impact that can be mitigated to less than significant*

*SU = Significant and Unavoidable impact*

### 5.3.2.2 Visual:

Operation of the At-Grade Emphasis LRT Alternative above ground along 2<sup>nd</sup>, Main, Los Angeles, and Temple Streets would be a minimal change to the visual setting of properties in this area of the APE.

### Section 106 Effects Analysis for Historic Properties

There would be an effect, but no adverse effect, to historic properties in areas in the APE where the new LRT would be visible. No adverse effect would occur because the changes would not directly alter characteristics of historic properties in the APE in a manner that would diminish the integrity of the property's location, design, setting, materials, workmanship, feeling, or association.

### CEQA Impact Analysis for Historical Resources

Potential changes to historical resources within the APE where the LRT would be visible would not constitute a substantial adverse change that would impair the significance of historical resources. The project, therefore, would have a less than significant impact upon historical resources.

### 5.3.2.3 Noise and Vibration

Noise from LRT operations would be generated from the interaction of wheels on track, motive power, signaling and warning systems, platform announcements, and operation of TPSS. The interaction of steel wheels on rails generates three different types of noise depending on the type of track work. These include: (1) noise generated from wheel squeal on tightly curved track, (2) noise generated on special trackway sections, such as at crossovers or turnouts, and (3) noise generated by rolling of the wheel over continuous rail. According to the Noise and Vibration Technical Memorandum, only one moderate noise effect/impact is anticipated from LRT operation to a CRHR-eligible property. Only the first floor of the Higgins Building (APE Map #8-11) would be subjected to a moderate noise effect/impact, but since the Higgins Building is not eligible for the NRHP, no historic properties would be affected. Wheel skirts would be included on LRT vehicles to reduce the wayside noise levels, but this design implementation would not reduce noise levels on the first floor of the Higgins Building to below moderate levels. Since the noise levels on the first floor of the Higgins Building would not be considered severe, the noise from LRT operation would not be considered a significant impact to a historical resource under CEQA.

Vibration impacts from transit operations would be generated by motions/actions at the wheel/rail interface. While vibration from a passing train would have a relatively small potential to move through the geologic strata, it could result in building vibration from energy transferred through the earth to the building's foundation. The principal concern with rail transit vibration is annoyance to building occupants; it is extremely unlikely that GBV from transit operations would cause any effect on or damage of any kind to buildings. For the At-

Grade Emphasis LRT Alternative no adverse effects or significant impacts to historic properties or historical resources would be expected.

### **Section 106 Effects Analysis for Historic Properties**

Noise and vibration caused by project operation would be an effect, but not an adverse effect, to historic properties within the APE. Project operations would not alter characteristics of historic properties in the APE in a manner that would diminish the integrity of the properties' location, design, setting, materials, workmanship, feeling, or association.

### **CEQA Impact Analysis for Historical Resources**

Potential noise and vibration impacts caused by operation of the At-Grade Emphasis LRT Alternative to the CRHR-eligible Higgins Building would not constitute a substantial adverse change that would impair the significance of the historical resource. The resource's features would remain to convey its significance. This alternative, therefore, would have a less than significant impact upon historical resources.

### **5.3.3 Cumulative and Indirect Impacts**

There are no expected indirect impacts under the At-Grade Emphasis LRT Alternative on historic resources.

Cumulative effects and impacts include short-term effects during construction such as noise, dirt, changes in setting from the use or storage of equipment, or lack of access due to congestion or revisions in traffic patterns. Cumulative effects may also result from long-term effects such as additional traffic brought about by increased density as new buildings are constructed. Taken collectively, reasonably foreseeable projects within the project area do not appear to have additional effects upon historic properties or impacts upon historical resources that would be affected by the At-Grade Emphasis LRT Alternative.

### **5.3.4 Potential Effects to Section 4(f) Resources**

The At-Grade Emphasis LRT Alternative would require the acquisition and/or use of property associated with five NRHP-eligible properties: Civic Center Historic District, Los Angeles Police Motor Transport Building (APE Map #6-7), City of Los Angeles Parker Center Police Department Building (APE Map #6-6), City Hall South (APE Map #6-4) as well as the 2<sup>nd</sup> Street Tunnel (APE Map #4-3).

| 9-R7        | 1 <sup>st</sup> Street Viaduct (Bridge #53C-1166)  | Eligible         | Eligible         | LTS             |                                 | X                  |                |

*Key for CEQA Impacts*

*LTS = Less Than Significant impact, no mitigation required*

*SI = Significant Impact that can be mitigated to less than significant*

*SU = Significant and Unavoidable impact*

### **Los Angeles Police Motor Transport Building**

The At-Grade Emphasis LRT Alternative would require the acquisition in-fee of a 16-foot strip of property that would be used for the construction of the proposed Los Angeles/1<sup>st</sup> Street station (northbound). An additional easement would be acquired for construction staging and would be situated to the east of the 16-foot strip. Neither the fee property nor the easement would touch or adversely affect the historic integrity of the Motor Transport Building as a more modern building currently buffers the Motor Transport Building from Los Angeles Street. Contingent upon consultation with the California SHPO and the Advisory Council on Historic Preservation (if the ACHP participates in consultation) and their respective concurrence, a *de minimus* impact finding would be consistent with FTA's *Guidance for Determining De Minimus Impacts to Section 4(f) Resources*.

### **City of Los Angeles Parker Center Police Department Building**

The At-Grade Emphasis LRT Alternative would require the acquisition in-fee of a 16-foot strip of property that would be used for the construction of the proposed Los Angeles/1<sup>st</sup> Street station (northbound). An additional easement would be acquired for construction staging and would be situated to the east of the 16-foot strip. Both the fee property and construction staging easement are located on the east side of Los Angeles Street and neither would touch or adversely affect the historical integrity of the Parker Center. Contingent upon consultation with the California SHPO and their respective concurrence, a *de minimus* impact finding would be consistent with FTA's *Guidance for Determining De Minimus Impacts to Section 4(f) Resources*.

### **City Hall South**

The At-Grade Emphasis LRT Alternative would require the acquisition of an 18-foot strip of property that would be used for the construction of the proposed Main/1<sup>st</sup> Street station (southbound). A construction staging easement would also be acquired along Main Street, as well as on the west side of Los Angeles Street. None of these acquisitions would touch or adversely affect the historical integrity of the City Hall South building. Contingent upon consultation with the California SHPO and the Advisory Council on Historic Preservation (if the ACHP participates in consultation) and their respective concurrence, a *de minimus* impact finding would be consistent with FTA's *Guidance for Determining De Minimus Impacts to Section 4(f) Resources*.

### **2<sup>nd</sup> Street Tunnel**

The At-Grade Emphasis LRT Alternative would require the piercing and use of the 2<sup>nd</sup> Street Tunnel to accommodate the proposed LRT corridor. The “punch through” required by this alternative would adversely affect the characteristics that make the 2<sup>nd</sup> Street Tunnel eligible for the NRHP. This would constitute a direct use, as the tunnel would be permanently incorporated into the proposed project. This use could only occur if 1) there is no prudent and feasible alternative to using the resource; and 2) the project includes all possible planning

to minimize harm to the tunnel from the use. Additional analysis of project alternatives and consultation with the California SHPO would be required.

### **Civic Center Historic District**

The At-Grade Emphasis LRT Alternative would require the fee acquisition of two strips of streetside property for the two parts of the split station as well as several construction staging easements on properties that are associated with three contributors to the NRHP/CRHR eligible Civic Center Historic District (as discussed above); the City Hall South Building, the City of Los Angeles Parker Center Police Department Building, and the Los Angeles Motor Transport Building. These acquisitions would not affect the historical integrity of these individual contributors and would also not affect the overall historical integrity and ability of the historic district as a whole to convey its significance. The property acquisitions, therefore, would have no adverse effect upon the Civic Center Historic District. Contingent upon consultation with the California SHPO and the Advisory Council on Historic Preservation (if the ACHP participates in consultation) and their respective concurrence, a *de minimus* impact finding would be consistent with FTA's *Guidance for Determining De Minimus Impacts to Section 4(f) Resources*.

## **5.4 Underground Emphasis LRT Alternative**

### **5.4.1 Construction Impacts**

Construction activities were analyzed using the Criteria of Adverse Effect (discussed in Section 3.2.1) for their potential to impact historic properties. Potential effects that may occur in the APE due to construction activities for the Underground Emphasis Alternative are discussed in this section. Short-term effects from construction typically result from dirt, changes in the visual environment, or alteration to access. Other types of construction effects may be related to specific construction activities or locations. Operational effects are discussed in Section 5.4.2. Table 5-3 indicates the resources that may experience construction effects due to their location within the APE.

#### **5.4.1.1 Temporary Dirt/Unintended Damage:**

Properties in the APE would be affected by construction activities including dirt and unintended damaged. Metro would employ BMPs to ensure that these effects are short-term.

### **Section 106 Effects Analysis for Historic Properties**

Dirt and other damage from construction would affect, but not adversely affect, historic properties in the APE because the potential effects would be short-term. The potential effects would not directly alter characteristics of historic properties in a manner that would diminish the integrity of the properties' location, design, setting, materials, workmanship, feeling, or association.

### **CEQA Impact Analysis for Historical Resources**

Dirt and other unintended damage during construction would not constitute a substantial adverse change that would impair the significance of historical resources. The impacts would be short-term and the majority of the resources' features would remain to convey their significance. The Underground Emphasis LRT Alternative, therefore, would have a less than significant impact upon historical resources.

#### **5.4.1.2 Traffic Congestion/Parking/Access:**

Changes in access to properties and resources within the APE may result from road closures, use of equipment, and other construction activities. Metro would employ BMPs to minimize these changes and keep the public and property owners informed of potential issues.

### **Section 106 Effects Analysis for Historic Properties**

Potential effects, but no adverse effects, would result from changes in access during construction. The effects would be short-term and would not alter characteristics of historic properties in a manner that would diminish the integrity of the properties' location, design, setting, materials, workmanship, feeling, or association.

### **CEQA Impact Analysis for Historical Resources**

Changes in access resulting from congestion and loss of parking during construction would not constitute a substantial adverse change that would impair the significance of historical resources. Potential impacts would be short-term and the majority of the resources' features would remain to convey their significance. The Underground Emphasis LRT Alternative, therefore, would have a less than significant impact upon historical resources.

#### **5.4.1.3 Visual:**

Visual changes may result from the storage and operation of equipment, cuts in the road, and signage used during construction. Metro would employ BMPs to minimize these changes and they should be short term.

### **Section 106 Effects Analysis for Historic Properties**

Visual changes during construction would affect, but not adversely affect, historic properties because the effects would be short-term. The changes would not directly alter characteristics of historic properties in a manner that would diminish the integrity of the properties' location, design, setting, materials, workmanship, feeling, or association.

### **CEQA Impact Analysis for Historical Resources**

Visual changes during construction would not constitute a substantial adverse change that would impair the significance of historical resources. The impacts would be short-term and the resources' character-defining features would remain to convey their significance. The

Underground Emphasis LRT Alternative, therefore, would have a less than significant impact upon historical resources.

#### **5.4.1.4 Demolition, Partial Takes, or Alteration of a Property:**

To construct the Underground-Emphasis LRT Alternative, one parcel that contains a historical resource would be acquired. The S. Kamada Restaurant, Atomic Café, Senior Fish, and Coast Imports (APE Map #7-30) is a CRHR-eligible (not NRHP eligible) commercial building built in 1913. The entire parcel is anticipated to be acquired to serve as the underground egress/ingress portal.

A subsurface easement would be acquired for the Higgins Building (APE Map #8-11). The easement would extend approximately five feet beyond the property line for the CRHR-eligible Higgins Building (not NRHP eligible). No project-related construction would affect the Higgins Building.

The Underground Emphasis LRT Alternative would also require the acquisition of a subsurface easement beneath the NRHP Eligible Cathedral of St. Vibiana Rectory (APE Map #8-13). The subsurface easement would extend approximately five feet beyond the north (2<sup>nd</sup> Street side) property line of the building. The easement acquisition is a requirement of the project to provide a buffer between subsurface project facilities and at-grade structures.

#### **Section 106 Effects Analysis for Historic Properties**

The subsurface easement for the area beneath the Cathedral of St. Vibiana Rectory would affect, but not adversely affect, the historic property. No project facilities would use any portion of the Rectory building or adversely affect the characteristics that make it eligible for the NRHP.

#### **CEQA Impact Analysis for Historical Resources**

The subsurface easement acquisitions that would extend five feet beyond the north (2<sup>nd</sup> Street side) property lines of the Higgins Building and the Cathedral of St. Vibiana Rectory would not constitute a substantial adverse change that would impair the significance of the historical resources, as no other project-related construction or use would directly affect the buildings. Due to the proximity of proposed project facilities to the buildings, indirect effects such as differential settlement and project related vibration have the potential to affect the structures (see Differential Settlement, Section 5.4.1.8, and Noise and Vibration, Section 5.4.1.7).

The property acquisition and subsequent demolition of the S. Kamada Restaurant, Atomic Café, Senior Fish, and Coast Imports building would constitute a substantial adverse change that would impair the significance of the historical resource. However, implementation of MM-BE-1 and MM-BE-5 would reduce impacts to a less than significant level.

#### 5.4.1.5 Station Construction

For the Underground Emphasis LRT Alternative, a new station would be constructed beneath Flower Street between 5<sup>th</sup> and 4<sup>th</sup> Streets. This would require demolition of a portion of the CRHR eligible Belmont Tunnel (APE Map #3-4). The Belmont Tunnel is not eligible for the NRHP. Another new station would be constructed on 2<sup>nd</sup> street. This alternative evaluates two possible locations for the proposed 2<sup>nd</sup> Street station: a location near Broadway or a location near Los Angeles Street. The Broadway Option would have entrances facing the NRHP eligible Los Angeles Mirror Building (APE Map #8-2). The Los Angeles Street Option has proposed entrances opposite and next to the NRHP eligible St Vibiana Rectory (APE Map #8-13). Although the design of proposed stations is not finalized, conceptual renderings indicate simple glass canopies supported on steel frames would be likely. The design and materials would be clearly differentiated from the PWA Moderne Style of the Mirror Building and the Classical Revival Style of the Rectory Building. The massing and scale would be modest in comparison with nearby historic properties.

#### Section 106 Effects Analysis for Historic Properties

Construction of proposed stations would affect, but not adversely affect, the Los Angeles Mirror Building or the St. Vibiana Rectory. No adverse effects would occur to these historic properties because the changes would not diminish the integrity of the location, design, setting, materials, workmanship, feeling, or association.

#### CEQA Impact Analysis for Historical Resources

Construction of proposed stations would not constitute a substantial adverse change that would impair the significance of the historical resources. The change in setting created by the station would not diminish the integrity of the properties' significant historic features. The Underground Emphasis LRT Alternative would therefore have a less than significant impact upon historical resources. Implementation of MM-BE-1 would reduce any impact to the CRHR-eligible Belmont Tunnel to a less than significant level.

#### 5.4.1.6 Portal

The proposed train portal at the intersection of Alameda and 1<sup>st</sup> Street would be within the viewshed of two historic properties, the Little Tokyo National Historic Landmark Historic District and the NRHP eligible John A. Roebling Sons Co. Building (APE Map #7-35). However, the portal area is not encompassed within the boundary of a historic property, historical resource, or a contributing element to the significance of either property. An asphalt paved parking lot currently occupies the majority of the parcel.

#### Section 106 Effects Analysis for Historic Properties

No adverse effect would occur to the Little Tokyo National Historic Landmark District or the John A. Roebling Sons Co Building from the construction of the portal. Potential effects

would not alter the setting of historic properties in a manner that would diminish the integrity of the historic district.

### **CEQA Impact Analysis for Historical Resources**

Construction of the portal would not constitute a substantial adverse change that would impair the significance of historical resources. The change in setting created by the portal would not diminish the integrity of the resources' significant historic features. The Underground Emphasis LRT Alternative, therefore, would have a less than significant impact upon historical resources.

#### **5.4.1.7 Noise and Vibration**

According to the Noise and Vibration Technical Memorandum, construction activities with the most potential for noise impacts include the cut and cover tunnel under Flower Street, proposed underground cut and cover stations at Flower/6<sup>th</sup>/5<sup>th</sup> Streets and 2<sup>nd</sup>/Hope Street, and the junction at Temple and Alameda Streets, which includes lowering Alameda Street. To ensure potential noise impacts are minimized during construction, all construction activities would conform to the provisions in Section 41.40(a) of the City of Los Angeles Code. Furthermore, BMPs would be employed to reduce any potential noise effects to historic properties to result in a “no adverse effect” finding and/or minimize potential impacts to historical resources to a less than significant level.

Noise levels for the tunnel boring machine (TBM) were not evaluated as a part of the Noise and Vibration Technical Memorandum because the TBM “is underground and produces little to no noise that reaches the surface land uses.” Operations at the portal/launch site for the TBM, where bored material is hauled out, treated, and removed, also would not impact historic properties and historical resources as noise levels from these activities would not exceed ambient noise levels.

For the Underground Emphasis LRT Alternative, pre-augering of soldier piles at cut and cover sections would eliminate the need for impact pile driving. This would leave “Large Bulldozer” and “Drill Rigs” as the main sources of construction vibration. If these large pieces of equipment are not used within 21 feet of a historic property or historical resource, there would be no adverse effects and significant impacts to historic properties and historical resources from GBV would not occur. Properties that are close to the project work zone and which may be affected by construction-related vibration include Barker Brothers (APE Map #2-1), Roosevelt Building (APE Map #2-7), General Petroleum-Mobil Oil Building (APE Map #2-12), Superior Oil Building (APE Map #2-13), California Club (APE Map #3-1), Los Angeles Central Library (APE Map #3-2), 2<sup>nd</sup> Street Tunnel (APE Map #4-3), Mirror Building (APE Map #8-3), Higgins Building (APE Map #8-11), Cathedral of Saint Vibiana (APE Map #8-12), and Cathedral of Saint Vibiana Rectory (APE Map #8-13).

The TBM would not cause vibratory effects or impacts to historic properties or historical resources because the TBM performs a slow moving drilling process that generates very little vibration to the surrounding areas. Studies have measured TBM vibration to be in the range of 0.0024 to 0.0394 inches per second PPV at a distance at 33 feet. The proposed TBM tunnels on 2<sup>nd</sup> Street would vary in depth due to the existing topography, as well as vertical curves in the alignment. The tunnel would range from about 140 feet below the surface (distance from street level to the top of the tunnel) to about 40 feet below the surface. The vibratory potential of the TBM is minimal and would be well below the FTA threshold for Category IV buildings (buildings extremely susceptible to vibration damage) of 0.12 inches per second PPV.

### **Section 106 Effects Analysis for Historic Properties**

There would be an effect, but no adverse effect, to the Barker Brothers, Roosevelt, General Petroleum Mobil Oil Building, Superior Oil Building, California Club, Los Angeles Central Library, 2<sup>nd</sup> Street Tunnel, Mirror Building, Cathedral of Saint Vibiana, and the Cathedral of Saint Vibiana Rectory from noise and vibration-induced damage from construction, if measures MM-BE-2 and MM-BE-3 are implemented. If these measures are properly implemented, construction of this alternative would not diminish the integrity of the historic properties' location, design, setting, materials, workmanship, feeling, or association.

### **CEQA Impact Analysis for Historical Resources**

The potential for construction-related vibration could cause a substantial adverse change that would impair the Barker Brothers, Roosevelt, General Petroleum Mobil Oil Building, Superior Oil Building, California Club, Los Angeles Central Library 2<sup>nd</sup> Street Tunnel, Mirror Building, Cathedral of Saint Vibiana, the Cathedral of Saint Vibiana Rectory, or the Higgins Building. The implementation of MM-BE-2, MM-BE-3, and MM-BE-5 would reduce the potential impacts to a less than significant level.

#### **5.4.1.8 Differential Settlement**

According to the Description of Construction, at least eight NRHP and/or CRHR eligible properties could be potentially affected by tunneling (TBM operation) and cut and cover construction. They include the Standard Hotel (APE Map #2-13), California Club (APE Map #3-1), Walt Disney Concert Hall (APE Map #4-4), 2<sup>nd</sup> Street Tunnel (APE Map #4-3), former Nishi Hongwanji Buddhist Temple (APE Map #7-19), Los Angeles Times Building (APE Map #8-2), Higgins Building (APE Map #8-11), and St. Vibiana's Cathedral (APE Map #8-12). Implementation of mitigation measures MM-BE-2, MM-BE-3, and MM-BE-4 (when applicable) would avoid potential adverse effects to historic properties and reduce potential impacts to historical resources to a less than significant level.

### **Section 106 Effects Analysis for Historic Properties**

Implementation of measures to protect and stabilize the ground near the Standard Hotel (APE Map #2-13), California Club (APE Map #3-1), 2<sup>nd</sup> Street Tunnel (APE Map #4-3), former Nishi Hongwanji Buddhist Temple (APE Map #7-19), Los Angeles Times Building (APE Map #8-2), and St. Vibiana's Cathedral (APE Map #8-12) noted in MM-BE-2, MM-BE-3, and MM-BE-5, would avoid adverse effects to all properties under this alternative. If properly implemented, differential settlement would not directly alter characteristics of historic properties in a manner that would diminish the integrity of each property's location, design, setting, materials, workmanship, feeling, or association.

### **CEQA Impact Analysis for Historical Resources**

The potential for differential settlement could constitute a substantial adverse change that would impair the significance of any or all of the historical resources noted in this section. Implementation of MM-BE-2, MM-BE-3, and MM-BE-5 would reduce potential impacts to a less than significant level.

### **5.4.2 Operational Impacts**

The additional transit options proposed under the Underground Emphasis LRT Alternative would be consistent with the historic use of streetcars within the APE. Additionally, the LRT could benefit historic properties and historical resources in the APE by increasing pedestrian use of the area.

Potential visual changes, traffic, and congestion from operation of the LRT under this alternative would have similar effects to historic properties under NEPA and impacts to historical resources under CEQA as those discussed for the At-Grade Emphasis LRT Alternative. Table 5-4 lists potential effects from operation of the Underground Emphasis LRT Alternative.

**Table 5-3. Potential Underground Emphasis LRT Alternative Construction Effects**

| APE Map No. | Name  | NRHP Eligibility | CRHR Eligibility | CEQA Evaluation | Right of Way Required | No Historic Properties Affected | Effect-Not Adverse | Adverse Effect |
|-------------|---|------------------|------------------|-----------------|-----------------------|---------------------------------|--------------------|----------------|
| 2-1         | Barker Brothers   | Eligible         | Listed           | SI              |                       |                                 | X                  |                |
| 2-3         | Fine Arts Building, Global Marine House                         | Eligible         | Listed           | LTS             |                       |                                 | X                  |                |
| 2-5         | Engine Company No. 28   | Listed           | Listed           | LTS             |                       |                                 | X                  |                |
| 2-7         | Roosevelt Building  | Listed           | Listed           | SI              |                       |                                 | X                  |                |
| 2-10        | 811 Wilshire building, Tishman 615 building, Wilflower building | Eligible         | Listed           | LTS             |                       |                                 | X                  |                |
| 2-12        | General Petroleum, Mobil Oil Building                           | Listed           | Listed           | SI              |                       |                                 | X                  |                |
| 2-13        | Superior Oil Company Building                                   | Listed           | Listed           | SI              |                       |                                 | X                  |                |
| 3-1         | The California Club   | Eligible         | Listed           | SI              |                       |                                 | X                  |                |
| 3-2         | Los Angeles Central Library                                     | Listed           | Listed           | SI              |                       |                                 | X                  |                |

**Table 5-3. Potential Underground Emphasis LRT Alternative Construction Effects**

| APE Map No.                       | Name   | NRHP Eligibility | CRHR Eligibility | CEQA Evaluation | Right of Way Required | No Historic Properties Affected | Effect-Not Adverse | Adverse Effect |

<sup>a</sup> *Right of Way Required is a sub-surface easement*

*Key for CEQA Impacts*

*LTS = Less Than Significant impact, no mitigation required*

*SI = Significant Impact that can be mitigated to less than significant*

*SU = Significant and Unavoidable impact*

#### 5.4.2.1 Noise and Vibration

The Underground Emphasis LRT Alternative has the same potential sources of noise impacts during operations as the At-Grade Emphasis LRT Alternative. According to the Noise and Vibration Technical Memorandum, no noise, adverse effects, or significant impacts to historic properties or historical resources would be expected. Most of this alternative would be situated underground, and thus project operations would not exceed FTA Noise Impact Criteria. Operation of the Underground Emphasis LRT Alternative would result in a moderate noise impact at only one location, a proposed switch on Alameda near 1<sup>st</sup> Street. Moderate noise impacts do not exceed the FTA Noise Impact Criteria.

For the Underground Emphasis LRT Alternative, potential vibration impacts from transit operations would be generated by two of the same potential sources as the At-Grade Emphasis LRT Alternative: motions/actions at the wheel/rail interface and areas of special track work. While vibration from a passing train and areas of special track work have a relatively small potential to move through the geologic strata, it can result in building vibration from energy transferred through the earth to a building's foundation. The principal concern with rail transit vibration is annoyance to building occupants; it is extremely unlikely that GBV from transit operations would have any effect on or cause any damage to buildings. For the Underground Emphasis LRT Alternative, no adverse effects or significant impacts to historic properties or historical resources related to vibration would be expected.

Table 5-4 lists the potential operational effects and impacts for this alternative by resource.

#### 5.4.3 Cumulative and Indirect Impacts

There would be no indirect impacts from the Underground Emphasis LRT Alternative.

Cumulative effects and impacts include short-term effects during construction such as noise, dirt, changes in setting from the use or storage of equipment, or lack of access due to congestion or revisions in traffic patterns. Cumulative effects may also result from long-term effects such as additional traffic generated by increased density as new buildings are constructed. Taken collectively, reasonably foreseeable projects in the project area do not appear to have additional effects upon historic properties or impacts upon historical resources that would be affected by the Underground Emphasis LRT Alternative.
