

Building a green future

## Metro's Green Construction Policy

Metro®

# Metro's Green Construction Policy

Through the *America Fast Forward* Program, Metro is endeavoring to accelerate construction of Measure R projects and bringing about a greener future for LA County. Despite these efforts, there remains the risk of harmful emissions from construction equipment and traffic generated by construction activities.

To reduce such impacts, Metro will use greener, less polluting construction equipment and vehicles. The agency will also implement best practices to meet or exceed air quality emission standards in all construction projects performed on Metro properties and rights-of-way.

We also will work through a collaborative process for the implementation of the policy in other jurisdictions that receive Metro funding for construction projects.

This Green Construction Policy complements Metro's Environmental Policy, which commits to, among other things:

- > Operating and maintaining Metro vehicles and facilities to minimize negative impacts on the environment
- > Integrating environmentally-friendly and sustainable features in the planning, design, construction and operation of our facilities and services
- > Building relationships with our contractors, vendors, consultants and transit partners to protect and enhance the environment
